

Stepping Into Spring with Curalta!

As we approach April marking **National Foot Health Awareness Month**, it's the perfect time to focus on wellness and movement from the ground up! At Curalta, we're championing this mission through expert care and, now more than ever, through **groundbreaking research**.

April is our chance to bring foot health front and center, so let's work together to educate patients and promote preventative care.

Easy Ways You Can Participate:

- **Share Foot Facts:** Post simple tips or a "Foot Fact of the Day" in your waiting room.
- **Reminder Time:** Gently nudge your patients who have diabetes or circulation issues to schedule their vital check-ups.
- **Shoe Smart:** Advise patients on choosing appropriate footwear as seasons change.
- **Beyond the Obvious:** Highlight lesser-known signs of foot trouble (numbness, skin changes, subtle nail issues).
- **Early Action:** Stress the importance of addressing common issues like heel pain, tendonitis, or ingrown nails before they worsen.

Expanding Horizons

A New Chapter in Research

We're thrilled to announce that our new, state-of-the-art clinical research facility is officially open & seeing patients! This dedicated space allows Curalta to expand our commitment to advancing medical knowledge and exploring innovative treatments.

We're expanding our research focus. While foot and ankle health remains a core passion, we're now launching exciting new studies in areas aimed at improving overall quality of life, including potential trials related to **weight loss** and **Alzheimer's disease**. *Stay tuned for more details on these specific trials soon!*

Now Enrolling: QUTENZA® Study for Painful Diabetic Neuropathy (PDPN)

Study Focus: This observational study aims to evaluate the effectiveness of repeated QUTENZA® use in adults experiencing Painful Diabetic Peripheral Neuropathy (PDPN) of the feet.

Other Ongoing Clinical Trials:

Our commitment to research extends to other vital areas. We are currently conducting trials focused on:

- **Non-healing Diabetic Foot Ulcers:** A prospective, randomized, multicenter controlled trial evaluating treatments alongside standard care.
- **Refractory Diabetic Foot Ulcers:** A prospective randomized, sham-controlled, double-blinded, pivotal clinical trial. This one is investigating the use of concurrent optical and magnetic stimulation (COMS).
- **Plantar Fibromatosis (Ledderhose Disease):** A Phase 3, double-blind, randomized, placebo-controlled study assessing a new potential treatment, EN3835.

Learn More & Get Involved:

If you or someone you know might be interested in learning more about these clinical trials, please contact our research department or visit our website for details.

Rave Review

Dr. Martin Carey

Joining Curalta has been a game-changer for my practice and my peace of mind. Being part of a larger podiatry group means I no longer have to worry about the administrative burdens that used to take time away from patient care. With shared resources and operational support, I can focus on what I do best—helping patients heal and stay active. Plus, the financial stability of a bigger network has taken the stress out of cash flow concerns. Curalta has provided me with the tools, support, and community I needed to elevate my practice and my quality of life.
